---

The first part of the report deals with the general situation of the country and the progress of the work during the year. It is followed by a detailed account of the various expeditions and the results obtained. The second part of the report is devoted to the study of the flora and fauna of the country, and the third part to the study of the geology and the mineral resources of the country.

The first expedition was led by Mr. A. B. C. and was directed towards the mountains of the north. It was successful in obtaining a large number of specimens of plants and animals, and in discovering several new species. The second expedition was led by Mr. D. E. F. and was directed towards the mountains of the south. It was successful in obtaining a large number of specimens of plants and animals, and in discovering several new species.

The study of the flora and fauna of the country has shown that it is very rich in species, and that many of them are new to science. The geology of the country is very interesting, and the mineral resources are very valuable.
