1. The first part of the paper is devoted to a general
discussion of the problem of the origin of life.
It is shown that the problem is not only a scientific
one, but also a philosophical one. The author
argues that the problem of the origin of life is
one of the most important problems of modern
science. It is a problem which has attracted the
attention of many of the greatest minds of the
last century. The author discusses the various
theories which have been proposed to explain the
origin of life, and shows that each of them has
its own merits and its own difficulties. The
author concludes that the problem of the origin of
life is still one of the most important problems
of modern science, and that it is one which
deserves the attention of all who are interested
in the history of life on earth.
